

HB TO IB-E CONNECTION

Cost effective control solution with enhanced features for your MDR ZPA applications

HBM-604BP-UL

IB-E03AP

Technology Partner

A ROCKWELL AUTOMATION PARTNER

FEATURES:

- An HBM-604B-UL can handshake signals to the IB-E03A, and an HBK-608F can handshake signals to the IB-E04F
- Product will accumulate at the last HB card before the IB-E card
- When ready, a forced run signal can be sent from the IB-E to the HB to release product downstream
- If an HB card has an error, the error output signal can be pulsed from the HB card to the IB-E card, which can determine the error condition and bring it to upper level **EtherNet/IP™** communication
- A reset signal can be sent from the IB-E card to clear the error condition in the HB
- Cost effective solution for network connection to fixed logic cards
