

# CB-002N TO CB-016N7 TRANSITION

## Driver Cards

### CHANGES:

- The CB-016N7 is the replacement for the CB-002N driver card
  - The CB-016N7 has a slightly different size than the CB-002N, and therefore has different mounting hole placements
  - To mount a CB-016N7 on a conveyor frame where a CB-002N was previously installed, we offer an adapter kit containing a galvanized steel mounting plate and a plug-and-play wiring harness for increased connectivity\*
- \*Adapter kit sold separately from CB-016N7 driver cards

### BENEFITS:

- Ability to reuse existing mounting holes in the frame
- No need to rewire

### ADVANTAGES OF CB-016N7 OVER CB-002N:

- Stable speed function to ensure articles of different weights travel at the same rate
- Adjustable acceleration and deceleration time
- Enhanced error diagnostics with LED flashing sequence
- Improved circuitry gives the existing roller more power
